Bilingualism and Executive Function: An Interdisciplinary Approach May 18-19, 2015
City University of New York Graduate Center

## DISCUSSION

on

## BILINGUALISM, LINGUISTIC STRUCTURE, AND EXECUTIVE FUNCTION IN CHILDREN Klara Marton Antonella Sorace

## Virginia C. Mueller Gathercole

Linguistics Program, Florida International University

## THIS SESSION: 2 impressive, thoughtprovoking studies:

Marton: Do bilingual children perform more efficiently in experimental tasks than their monolingual peers?
Sorace: L1 attrition meets L2 acquisition in proficient late bilingualism

## Both Studies:

Provide rich food for thought concerning exactly what is influencing what in bilinguals' performance on linguistic and non-linguistic tasks, EF in particular.

## Both Studies:

Provide rich food for thought concerning exactly what is influencing what in bilinguals' performance on linguistic and non-linguistic tasks, EF in particular.
Are attempting to separate a range of factors influencing performance in Bilinguals and Monolinguals

## Both Studies:

Provide rich food for thought concerning exactly what is influencing what in bilinguals' performance on linguistic and non-linguistic tasks, EF in particular.
Are attempting to separate a range of factors influencing performance in Bilinguals and Monolinguals
Compare types of Bilinguals to explore the generality of effects across populations

## Marton:

- Influence of language proficiency on speed of processing
- Comparison of baseline, labeling, nonverbal cue, and proactive interference conditions on Accuracy and RT performance
- Comparison of monolinguals and bilinguals
- Comparison of bilingual children in distinct contexts

## Marton:

- Influence of language proficiency on speed of processing
- Comparison of baseline beling verbal cue, and proactive interrerence conditions on Accuracy and RT performance
- Comparison of monolinguals and bilinguals
- Comparison of bilingual children in distinct contexts

## Marton:

- Influence of language proficiency on speed of processing
- Comparison of baseline thelino verbal cue, and proactiv Especially ~ ${ }^{e}$ conditions on Accuracy : RT, Proactive performance Interference
- Comparison of monolinguals and bilinguals
- Comparison of bilingual children in distinct contexts

## Marton:

- Influence of language proficiency on speed of processing

## Especially ~

 RT, Proactive Interference- Examination of performance monitoring

## Marton:

- Influence of language proficiency on speed of processing
- Examination of performance monitoring

## Marton:

- Influence of language proficiency on speed of processing
- Examination of performance monitoring
- Relationships between performance in distinct tasks

## Marton:

- Influence of language proficiency on speed of processing
- Examination of performance monitoring
- Relationships between per ormance in distinct tasks

## Sorace:

- Explores the role of cognition - especially EF - in the linguistic performance of bilinguals
- Examines performance on a range of linguistic structures: Overt/null pronouns in Italian (Absence of) use of definite articles for generics in Italian
- Compares bilinguals with monolinguals
- Compares types of bilinguals

## Sorace:

- Explores the role of cognition - especially EF - in the linguistic performance of bilinguals
- Examines performance on a range of linguistic structures:

Overt/null pronouns in Italian
(Absence of) use of definite articles for generics in Italian

## Sorace:

- Explores the role of cognition - especially EF - in the linguistic performance of bilinguals
- Examines performance on a range of linguistic structures:

Overt/null pronouns in Italian (Absence of) use of definite articles for generics in Italian
~Referential ambiguity; syntax-pragmatics interface

## Sorace:

- Addresses the separate contributions of Processing and Transfer to Bilinguals' performance

## Sorace:

- Addresses the separate contributions of Processing and Transfer to Bilinguals' performance

Both are in evidence:
Processing: all Bils: over-use of overt pros (and under-use of null pros)
Transfer: E-I bilinguals: greater use of bare Ns for generics, more over-use of overt pros than S-I bilinguals

## Sorace:

- Proposes a trade-off in bilinguals' performance between
integration and updating in linguistic processing
and
inhibitory control

## Sorace:

- Proposes a trade-off in bilinguals' performance between
integration and updating in linguistic processing Mons > Bils
and inhibitory control

## Sorace:

- Proposes a trade-off in bilinguals' performance between
integration and updating in linguistic processing Mons > Bils
and inhibitory control

Bils > Mons

## Sorace:

- Proposes a trade-off in bilinguals' performance between
integration and updating in linguistic processing Mons > Bils
and

## inhibitory control

Bils > Mons

Competition between resources responsible for bilinguals' difficulties with referential ambiguity in null/overt pronoun use.

Strengths of these talks:
Attempt to uncover in more detail what factors contribute to bilinguals' performance:

Strengths of these talks:
Attempt to uncover in more detail what factors contribute to bilinguals' performance:

How language proficiency contributes to performance on linguistic and interference tasks - both accuracy and speed of processing

Strengths of these talks:
Attempt to uncover in more detail what factors contribute to bilinguals' performance:

How language proficiency contributes to performance on linguistic and interference tasks - both accuracy and speed of processing
What are the roles of language balance and environment on performance?

Strengths of these talks:
Attempt to uncover in more detail what factors contribute to bilinguals' performance:

How language proficiency contributes to performance on linguistic and interference tasks - both accuracy and speed of processing
What are the roles of language balance and environment on performance? Type of bilingual matters Marton: range of proficiency? environment? Sorace: L2ers with distinct L1s? environ?

## Strengths of these talks:

Address the role of EF and cognition in general in linguistic performance of bilinguals

Strengths of these talks:
Address the role of EF and cognition in general in linguistic performance of bilinguals
Examine contributions of processing limitations to bilinguals' language performance

Strengths of these talks:
Address the role of EF and cognition in general in linguistic performance of bilinguals
Examine contributions of processing limitations to bilinguals' language performance
Try to identify the locus of interaction between the two languages

Strengths of these talks:
Address the role of EF and cognition in general in linguistic performance of bilinguals
Examine contributions of processing limitations to bilinguals' language performance
Try to identify the locus of interaction between the two languages
Delineate linguistic sub-systems that are and are not affected by EF, processing limitations, and transfer

## Questions/Issues: Specific:

Marton:

## Questions/Issues: Specific:

Marton:
$\underset{\text { Proficiency }}{\text { Lang }} \rightarrow \underset{\substack{\text { Interference } \\ \text { Tasks }}}{\begin{array}{c}\text { Speed in } \\ \text { Proactive } \\ \text { ing }\end{array}} \rightarrow \underset{\text { Learning }}{\text { Implicit }}$

## Questions/Issues: Specific:

Marton:

## Speed in

$\underset{\text { Proficiency }}{\text { Lang }} \rightarrow \underset{\text { Interference }}{\text { Proactive }} \rightarrow \underset{\text { ing }}{\text { Monitor- }} \rightarrow \underset{\text { Learning }}{\text { Implicit }}$
Speed in $\Rightarrow \begin{gathered}\text { Proactive } \\ \text { Interference } \\ \text { Tasks }\end{gathered}$
Lang
Proficiency
$\rightarrow$ Monitoring
$\longrightarrow$ Implicit
Learning

## Questions/Issues: Specific:

Marton:

## Questions/Issues: Specific:

## Sorace:

## Questions/Issues: Specific:

## Sorace:

Why wouldn't a superior control of inhibition in bilinguals offset or compensate for any deficiencies in integration?

Questions/Issues: More general: 1. Both bring up Q of role of linguistic proficiency:

Questions/Issues: More general:

1. Both bring up Q of role of linguistic proficiency:
Marton: Clear effects of language proficiency on performance on proactive interference task

Questions/Issues: More general:

1. Both bring up Q of role of linguistic proficiency:
Marton: Clear effects of language proficiency on performance on proactive interference task
Sorace raises the Q of whether the items are "not completely acquired"

Questions/Issues: More general:

1. Both bring up Q of role of linguistic proficiency:
Marton: Clear effects of language proficiency on performance on proactive interference task
Sorace raises the Q of whether the items are "not completely acquired"

Also: "Younger monolingual control children also accept inappropriate overt pronouns"
as well as autistic individuals.

Questions/Issues: More general:
2. What about GENERAL cognition? How does this feed into the picture of language and EF performance?

Questions/Issues: More general:
2. What about GENERAL cognition? How does this feed into the picture of language and EF performance?
and
How do effects of general cognitive abilities influence performance relative to:

Exposure
SES

## Questions/Issues: More general:

Clear evidence that Exposure and SES affect language performance
Exposure: Both talks here; Bialystok, Luk, Peets, \& Yang, 2010; Bridges and Hoff, 2014; Gathercole \& Thomas, 2009; Harley, Allen, Cummins, \& Swain, 1991; Hoff, Core, Place, Rumiche, Senor, \& Parra, 2012; Kohnert \& Windsor, 2004; Lapkin, Swain, \& Shapson, 1990; Letts, 2013; Oller \& Eilers,2002; Paradis,2010; Place and Hoff, 2011; Gathercole, 2007; Thordardottir, 2011; Unsworth, in press; Windsor \& Kohnert, 2004; Wong-Fillmore, 2000;
SES: Calvo \& Bialystok, 2014; Chiat et al., 2013; Fuller et al, 2015; Gatt \& O'Toole, 2013; Oller \& Eilers, 2002; Stadthagen-González et al., 2013

Questions/Issues: More general:
2. What about GENERAL cognition? How does this feed into the picture of language and EF performance? and
How do effects of general cognitive abilities influence performance relative to:

Exposure
SES

Questions/Issues: More general:
2. What about GENERAL cognition? How does this feed into the picture of language and EF performance? and
How do effects of general cognitive abilities influence performance relative to:

Exposure
SES
and, for EF tasks, Language proficiency

Studies on EF in bilinguals in Wales
(Gathercole, et al., 2010, 2013)
Included
BPVS (Dunn, Dunn, \& Whetton, 1982)
PGC (Gathercole \& Thomas, 2007)
E Grammar (13 structures)
W Grammar (13 structures)
McCarthy Scales of Children's Abilities (McCarthy, 1972) [up to age 8]
Raven's Coloured Progressive Matrices (Raven, Court, \& Raven, 1983) [from age 7]

# McCarthy: Sub-sections: 

pictorial memory,
block building,
puzzle making,
tapping sequence,
number questions,
numerical memory,
numerical memory reversal,
and
counting and sorting

## McCarthy:

Sub-sections:
pictorial memory [Verbal Scale]
block building,
puzzle making,
tapping sequence,
number questions,
numerical memory,
numerical memory reversal,
and
counting and sorting

## McCarthy:

Sub-sections:
pictorial memory [Verbal Scale]
block building,
puzzle making, tapping sequence, number questions,
numerical memory, numerical memory reversal, and
counting and sorting

## McCarthy:

Sub-sections:
pictorial memory [Verbal Scale]
block building,
puzzle making, tapping sequence, number questions, numerical memory, numerical memory reversal, and
counting and sorting
[Perceptual-
Performance Scale]
[Quantitative]

McCarthy:
Sub-sections:
pictorial memory [Verbal Scale, Memory]
block building, puzzle making, tapping sequence, -- [Memory] number questions, numerical memory, numerical memory reversal, and counting and sorting
[Perceptual-
Performance Scale]
[Quanti- [Mem] tative]
ـ

## Participants:

Mon E
Bil: OEH, WEH, OWH [~ exposure, balance]
Ages: 3, 4, 5, Primary (7-8), Teens (12-15),
Younger Adults (20-40), Older Adults (60+)

Q 1:

Does general cognitive ability influence language proficiency?

- Correlations Cognitive ~ Linguistic Perform.
- Regression analyses, Linguistic/EF Perform Variables:
Cognitive performance
Home Language [~ Exposure]
SES [M's, F's professions and education] and, for EF, Language and Mon/Bil

## CONCLUSIONS

These studies provide a valuable addition to our knowledge concerning the factors that influence performance

- both on linguistic forms and EF tasks:

## CONCLUSIONS

## Linguistic:

Exposure
Language balance
Age of Acquisition
2L1, L2
Relation between the 2 languages
Processing
Interaction between Inhibition and Integration SES
General Cognitive level

## CONCLUSIONS

EF:
Language proficiency
SES
General Cognitive level
Bilingualism
2L1, L2

## CONCLUSIONS

These factors are often highly correlated, but their relative contributions seem to vary considerable across distinct ages and on distinct task types.
The present studies have gone a considerable distance in contributing to these debates.
We need to take seriously the importance of multiple factors in influencing performance in bilinguals.
